### Trainer Profile

8+ Yrs Exp(Manual + Automation Testing)  
ISTQB, QTP, QC, Loadrunner, CMAT, SoapUI certified  
Trained more than 1000 professionals

## Soap Webservice automation

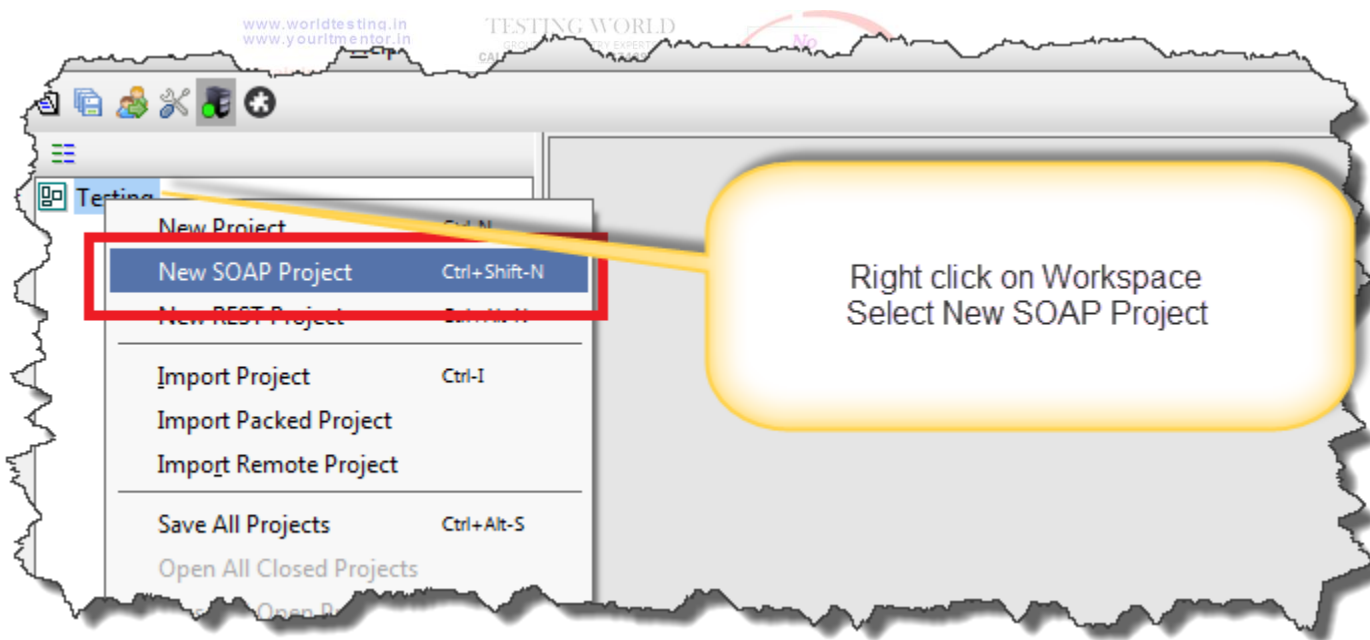

### Pre-requisite

We should have WSDL file or URL of WSDL file

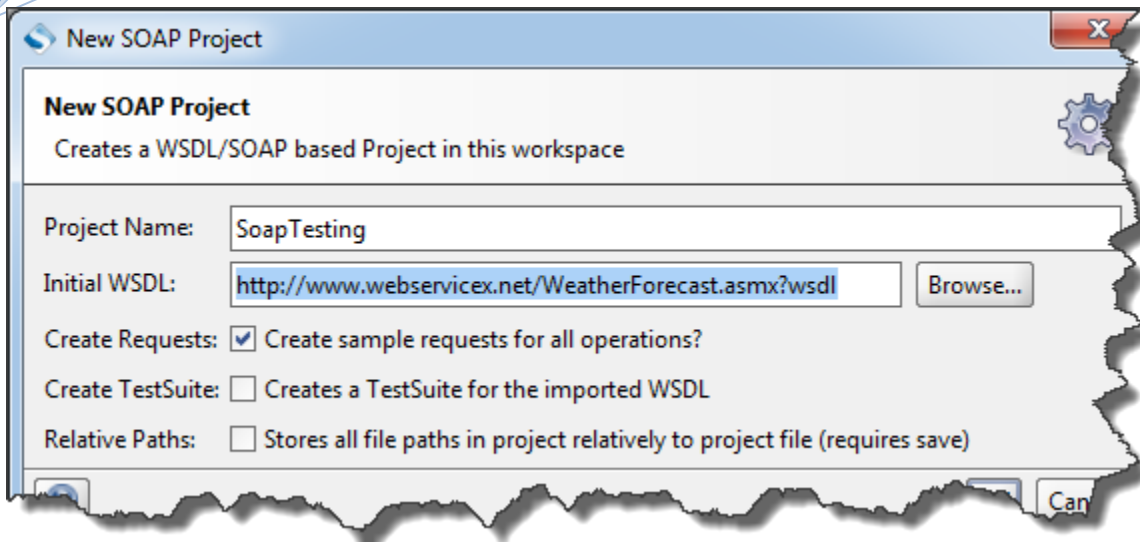

### Steps

**Step1:** Create a new Soap project

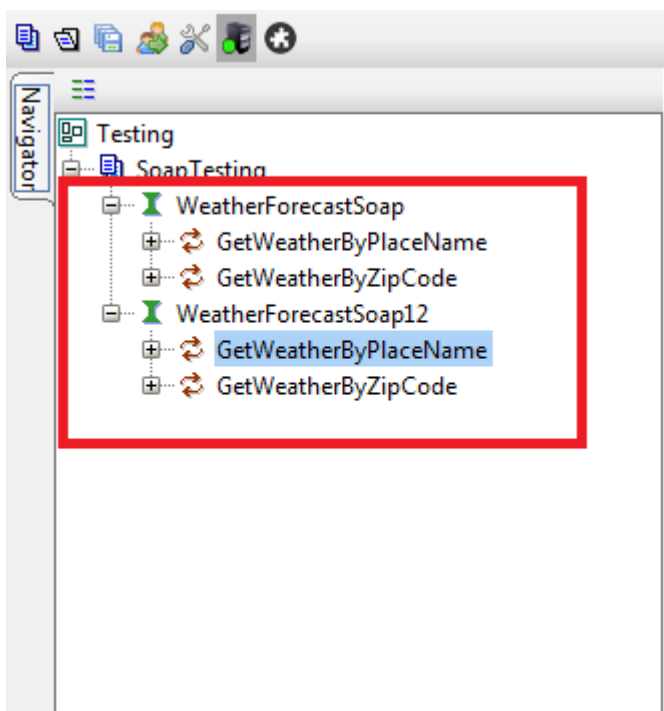

Right click workspace -> Select new Soap project

**Step2:** Give name of project and path of your wsdl file

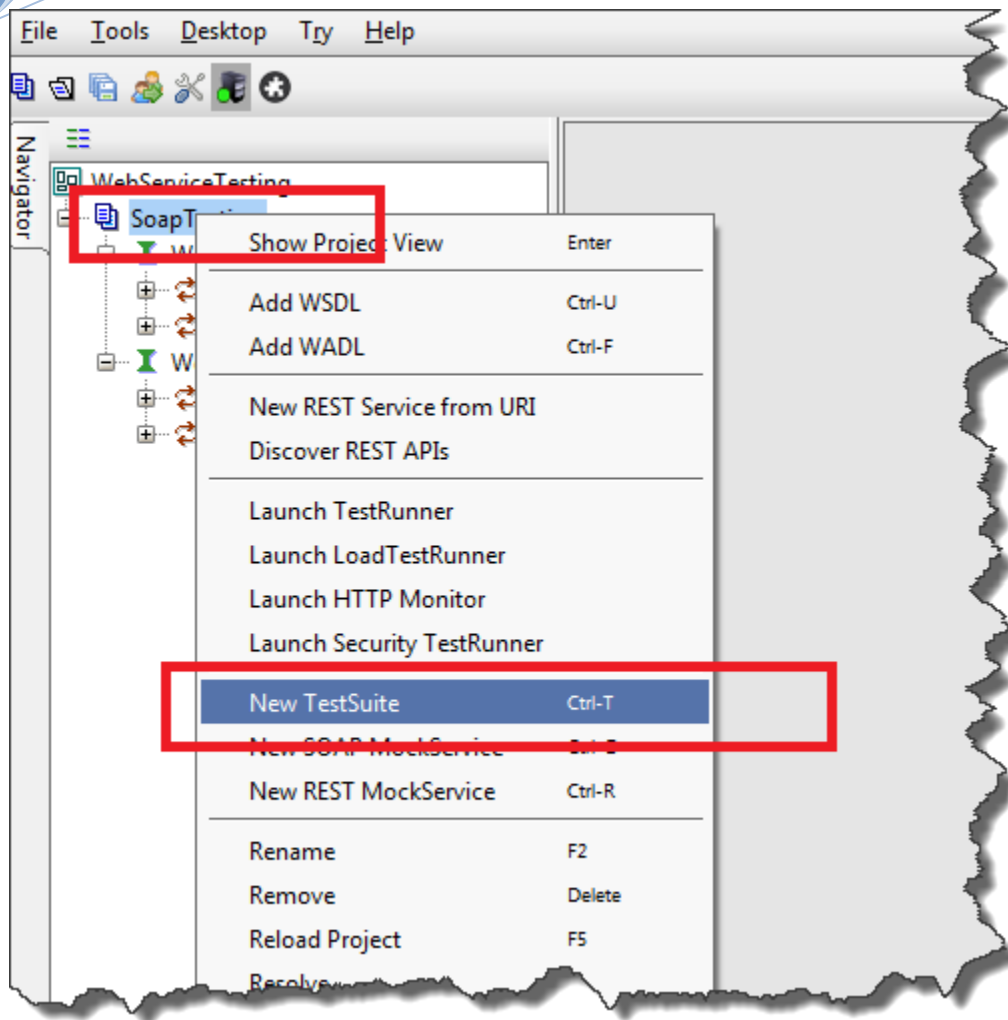

It will scan wsdl file and list all offered services in Navigator window

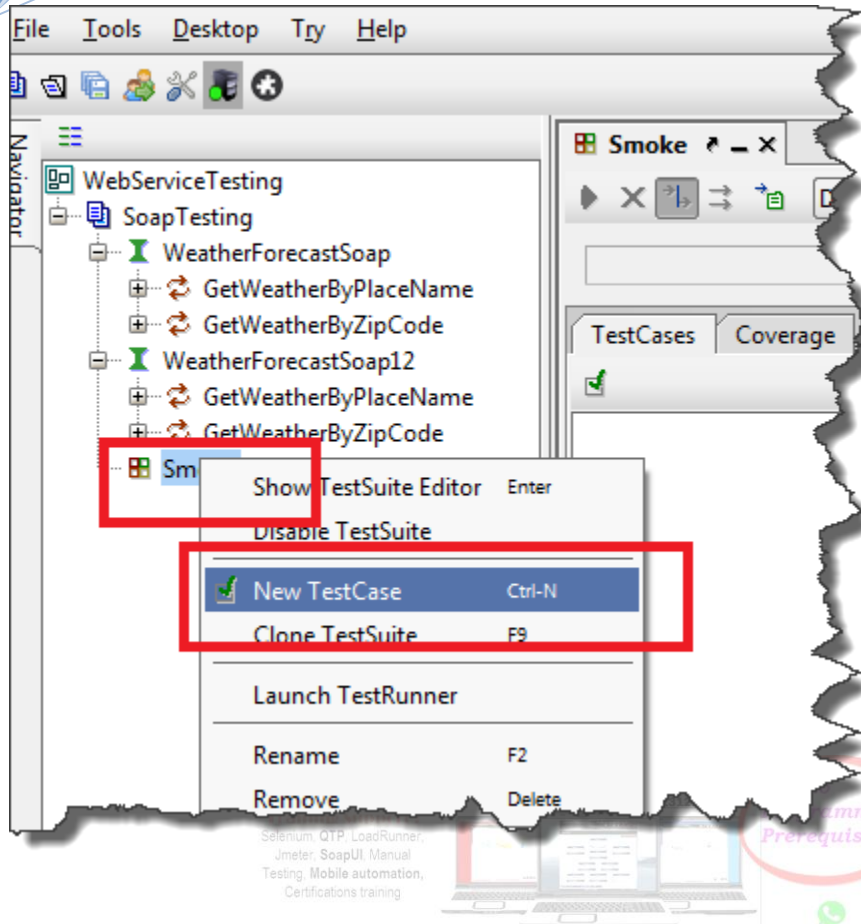

**Step3:** Now we need to create a TestSuite

Right Click on Project – Select New TestSuite, Give name to the test suite

**Step4:** Now we need to create a Case

Right Click on Test Suite – Select New Test Case, Give name to the test case

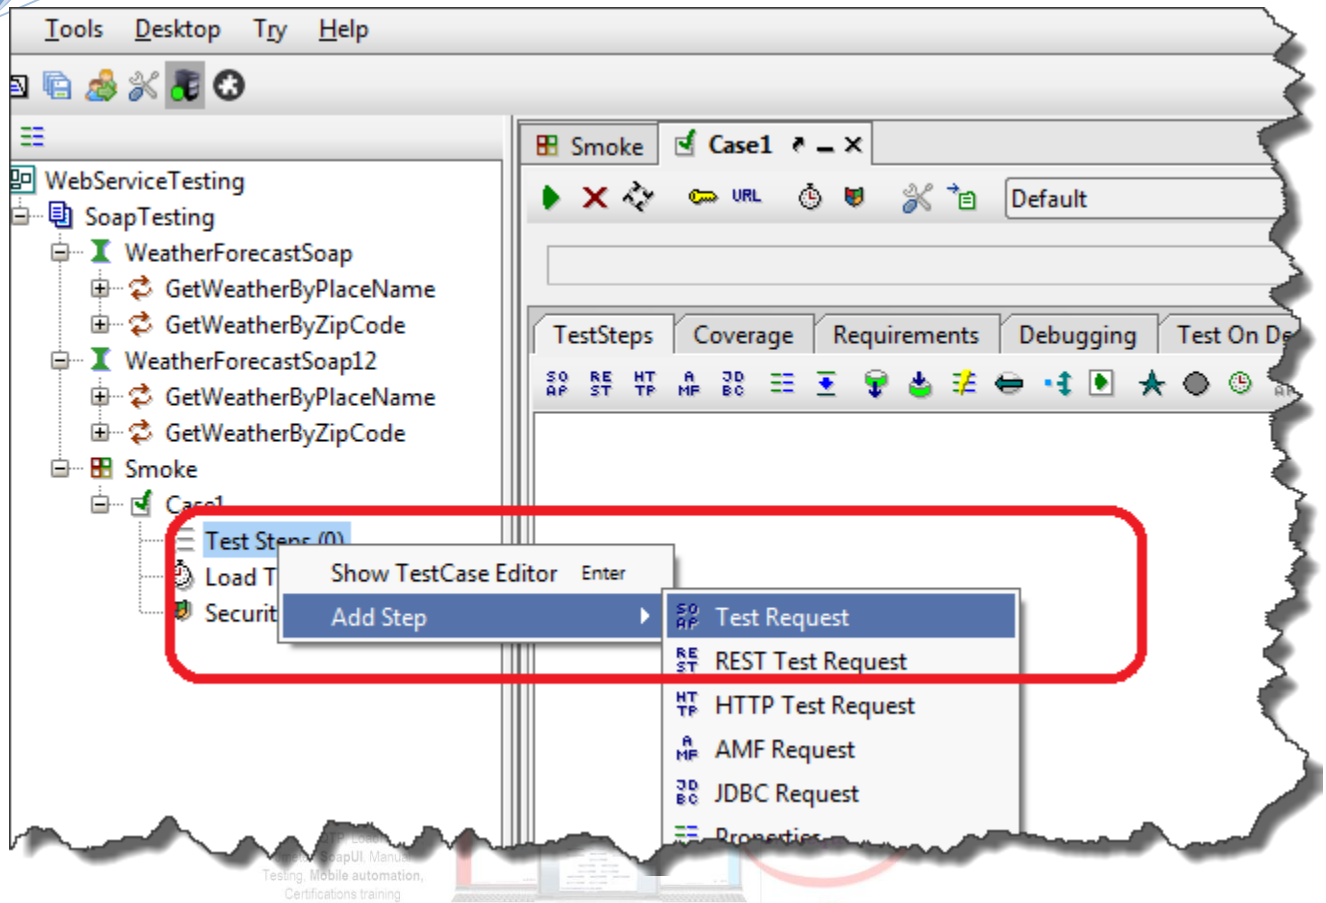

**Step5:** Now we can add test steps to newly created test case

**Test Steps:** Each service we want to hit of our application can be added as a test step

We have many other types of test steps as well to pick data from external source, to place data to external source etc that will be covered in later section

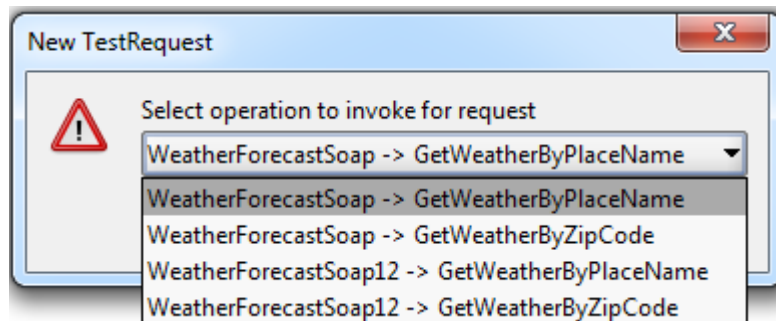

**Here we are going to add test step for hitting any service**

Right click on Test Steps(Under Test Case) - Add Step – Add Request(Soap)

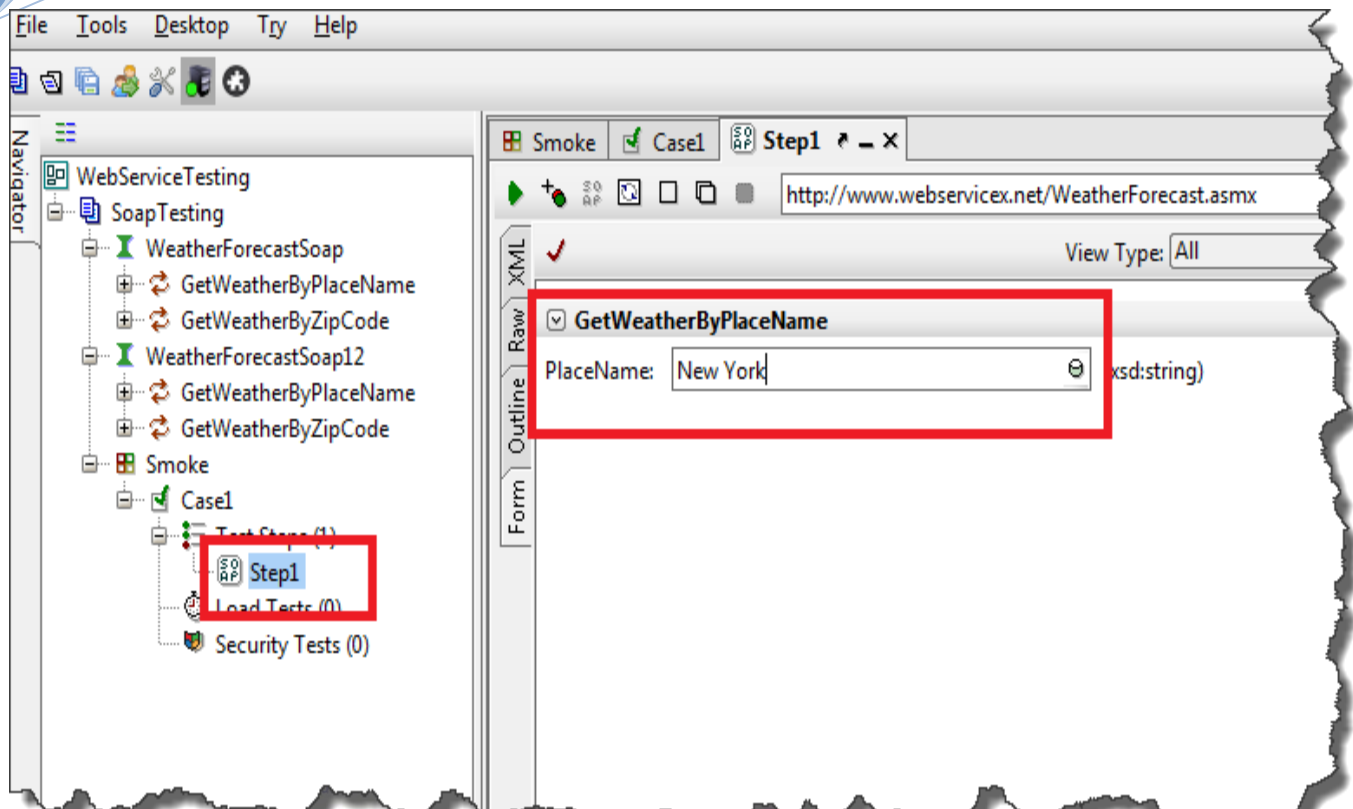

Give Name to Step and Select Service which you want to hit

Training by Industry Working Experts, Trained more than 300 professionals 8743913121

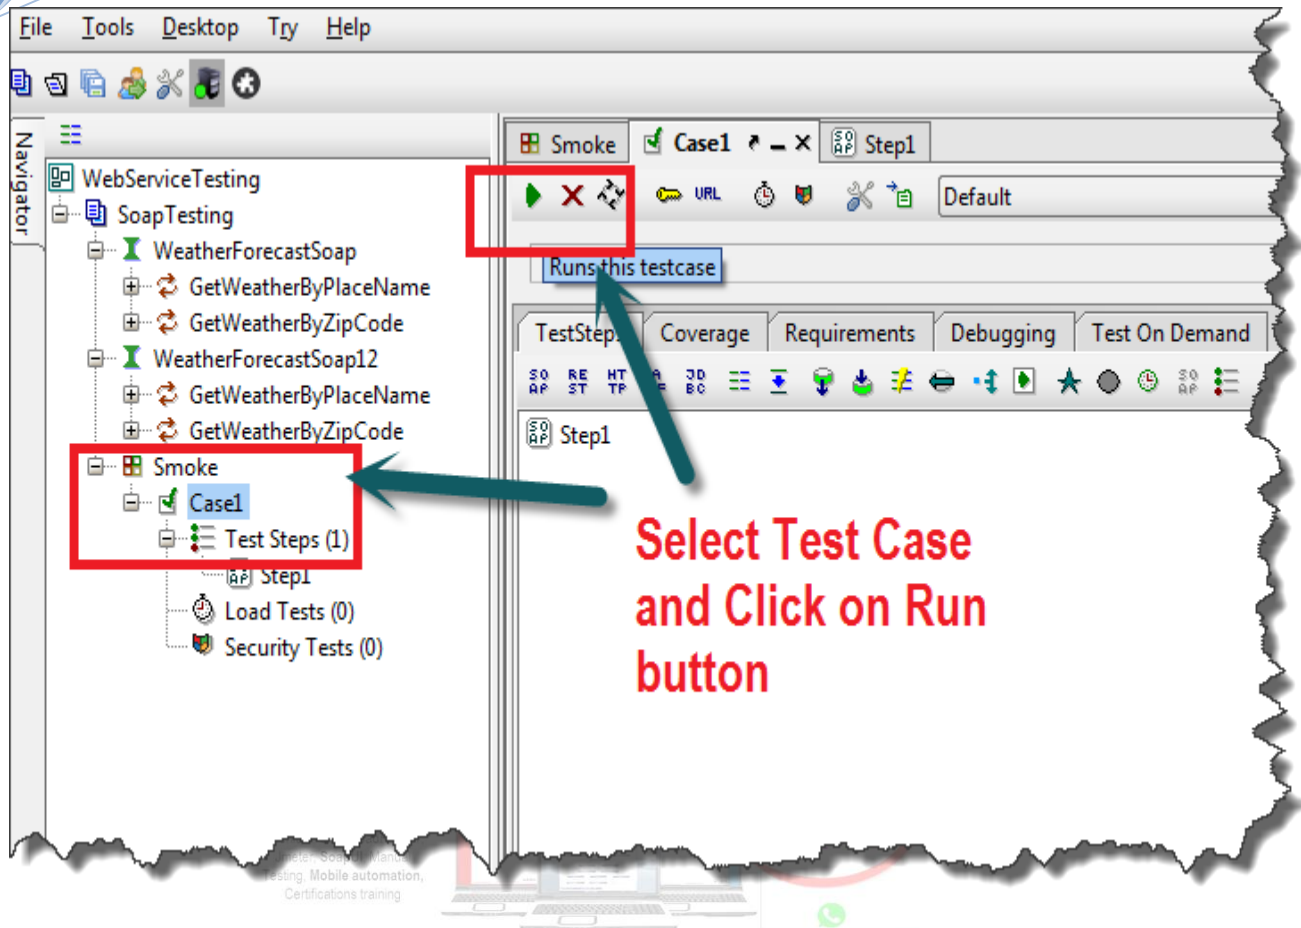

Here we will find, Service is added as a step to my test case

Give Input data in test step

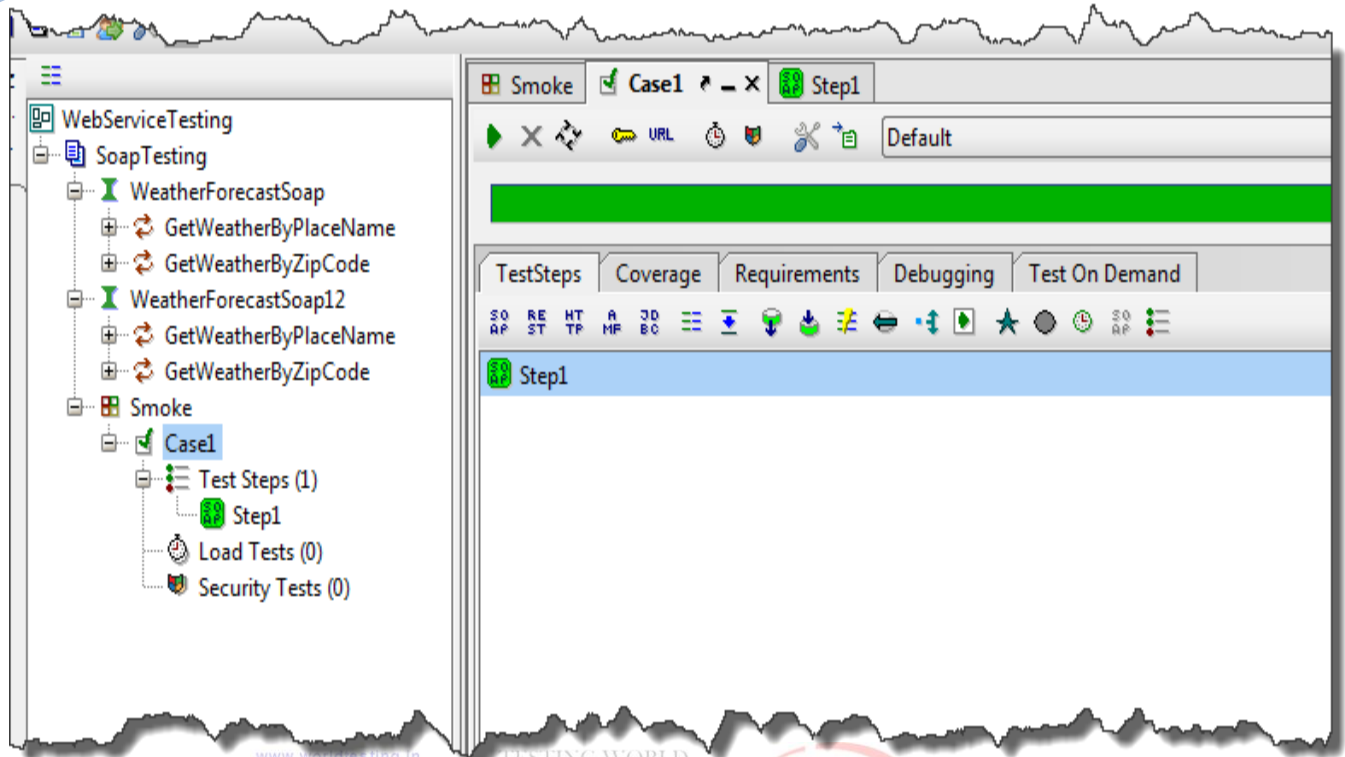

**Step6:** Now we have a test case with 1 test step which is hitting 1 service, we can Run test case Now

Select Test Case – Press Run button

Test case executed successfully Experts, Trained more than 300 professionals 8743913121
